**University of California
Marine Sciences
Santa Barbara, California**

UCSB Marine Sciences Theater was designed to be a showpiece lecture hall for the University. Renowned guest speakers use this room to present underwater video footage on the high-definition projector, 16' wide glass video screen and surround sound audio system. It is also used for large panel lectures and distance learning. Presenters can be on a boat at the Channel Islands and send video footage back to the theater. This AV system has the capability to split the screen in half for video images on one side and computer presentations on the other half. The entire system can be easily operated from a wireless AMX LCD touch-screen panel.
