Santa Barbara Zoo Santa Barbara, California

The Santa Barbara Zoo had several challenging audio visual needs in their new design for an outdoor theater stage for bird shows and other educational presentations. The system needed to be discreet but be able to amplify audio for up to 1,000 visitors. Up to 6 presenters would be on stage wearing headset microphones. The equipment needed to be durable and be able to withstand heavy outdoor use. We designed a powerful system that was compact and could be expanded for future needs.

In addition to the outdoor theater, Jensen Audio Visual has installed a PA system in the Ridley-Tree Restaurant for background music and announcements of food orders. The train station has a PA system for announcing the train schedule and for giving safety instructions. It also has a video system for watching educational shows while guests are waiting for the train.

“Installing an outdoor comprehensive audiovisual system at the zoo was a major challenge. Jensen Audio Visual designed unique solutions that covered all of our needs. They have earned our trust and never let us down.”
